

Condensed Activity Plan (Purpose & Student Message)

Time	Stage	Purpose	Message to Students
0–5 min	Launch	Set up tools, team, and responsible AI mindset before technical work begins.	Be ready, work in pairs, and use AI responsibly from the start.
5–15 min	Mission 1: Skim Like an Engineer	Show strengths and limits of quick human reading versus AI summary.	Compare your skim with AI output; trust evidence, not confidence.
15–27 min	Mission 2: Prompt Upgrade	Demonstrate that better prompts produce better engineering results.	Weak prompts give weak answers; write prompts with structure and evidence.
27–47 min	Mission 3: Requirement Treasure Hunt	Practice extracting requirements with proof and team verification.	Every extracted item must include a source reference and manual check.
47–62 min	Mission 4: Hallucination Hunt	Train students to detect unsupported or invented AI claims.	Challenge AI answers, label reliability, and catch hallucinations early.
47–62 min	Professional Reality Check	Connect class activity to safety-critical engineering decisions.	In real systems, always verify before acting; errors can cause harm.
62–70 min	Mission 5: Engineer's Reality Check	Build professional judgment about AI role, limits, risk, and accountability.	Use AI as support, not authority; engineers are accountable.
70–80 min	Mission 6: Ed Discussion Exchange	Reinforce learning through peer sharing and critique.	Share your best prompt and help classmates improve verification.
80–87 min	Mission 7: Reading Memo Sprint	Convert verified findings into professional technical writing.	Write your own memo from checked evidence, not copied AI text.
87–90 min	Exit Ticket	Capture key takeaways and close the lesson with reflection.	State what you learned and how you will apply safe AI practice.
